

Math, Diagrams and Charts

Math and diagram fences are rendered **in the browser**, at print time: KaTeX typesets the math, Mermaid draws the diagrams, Chart.js paints the charts. All three settle under one `window.__carveReady` promise that `print_cdp.py` awaits, so nothing is half-drawn when the page is captured. Without the corresponding library installed, each construct degrades to its readable source.

Inline and display math

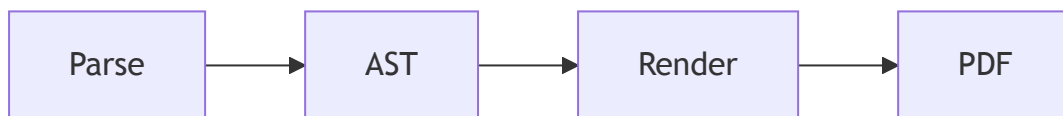

The mass-energy relation $E = mc^2$ appears inline in a sentence, while the Gaussian integral is shown as a centered display equation:

$$\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$

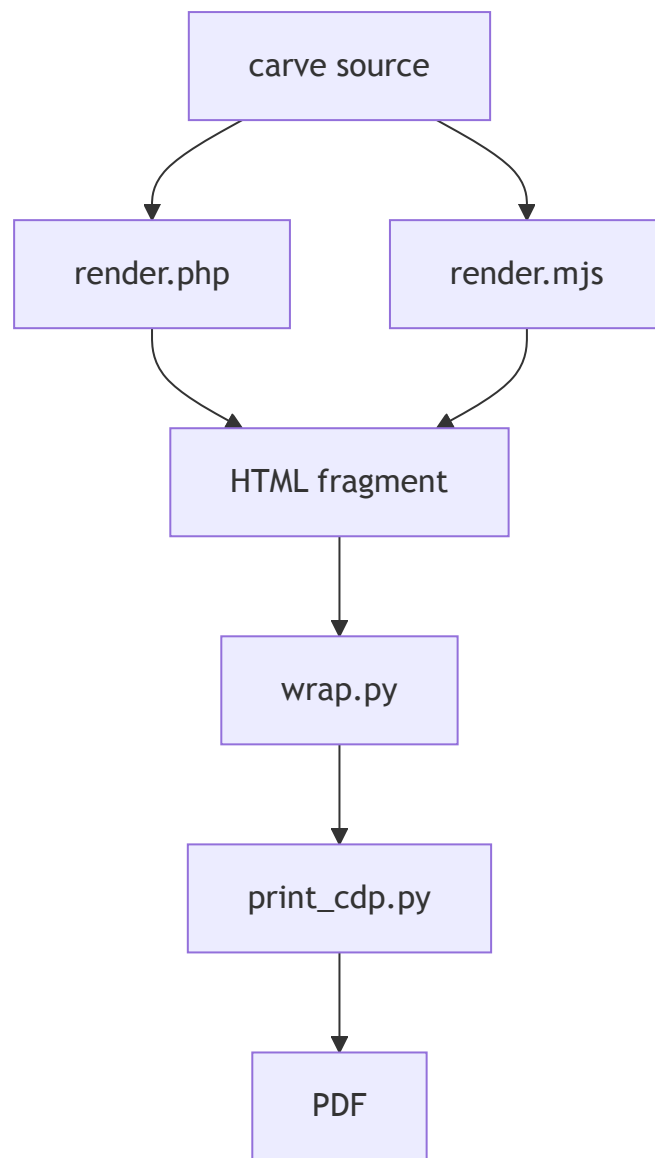

Another inline example: the quadratic roots $x = (-b \pm \sqrt{b^2 - 4ac})/2a$.

Diagrams

A flowchart, rendered to inline SVG by Mermaid:

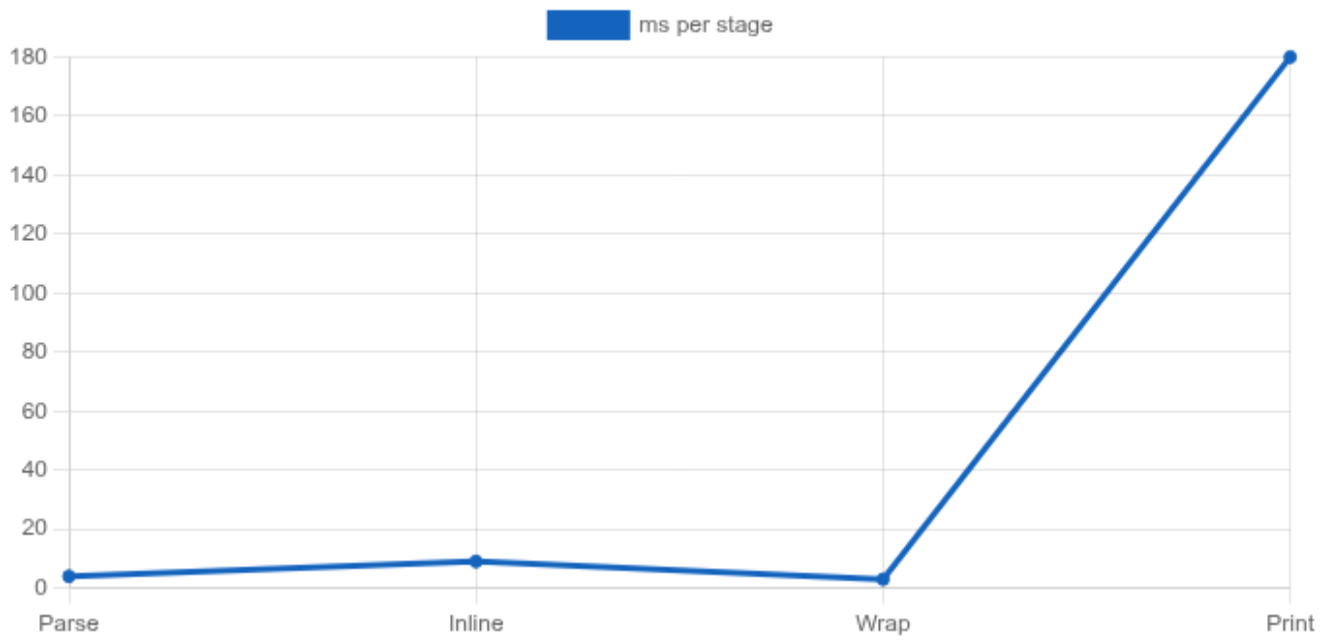

A second one, showing how the backends feed the same pipeline:

Charts

A `chart` fence carries a Chart.js config as JSON, drawn to a `<canvas>` :

Pipeline cost by stage

Point `CARVE_KATEX` , `CARVE_MERMAID` and `CARVE_CHART` at your installs, or let `crv2pdf` probe the usual locations.
